Description Sapindaceae, also known as the soapberry family, is a family of flowering plants in the order Sapindales. There are about 140–150 genera with 1400–2000 species, including maple, ackee, horse chestnut, and lychee.

Common name: sapindaceae
Color: yellow
Bloom time: july august
Height: 6-10 m
Difficulty level: easy to grow

Planting & Care
The Sapindaceae are mostly trees and shrubs, and tendril-bearing vines comprising about 140 genera and 1,500 species. The leaves are alternate, simple, or more commonly pinnately compound; stipules are absent except in the climbing forms. The flowers are small, actinomorphic or zygomorphic, and commonly functionally unisexual,
although a given individual may bear seemingly bisexual flowers together with either male or female flowers. The perianth typically is biseriate, consisting of calyx and corolla

Sunlight: Full Sun to Partial Shade

Soil: well-drained soil

Water: medium

Temprature: 20-22 deg C.

Fertilizer: Apply any organic fertilizer

Care:

- The lower flower is functionally female, although the flower looks bisexual.
- Though not obvious here, the 5-carpellate gynoecium in this species is exceptional in the family.
- The two upper flowers are functionally male and show no evidence of a pistil.

Care:

- Notched Leaf Soapnut is a medium to large size deciduous tree growing up to 18 m tall, with a 1.
- 5 m trunk girth.
- Bark is grey, shiny, covered with rough falling scales.
- Leaves are pinnate, 12-30 cm long.
- Leaflets are 2-3 pairs, lance-shaped, elliptic or oblong, long pointed or with a notched tip, dull above.
- Flowers are white, polygamous, male flowers

Special Feature:
a few bisexual, both found in the same rusty-velvety panicles. Bisexual flowers provide ample pollen and nectar to bees
Use
Medicinal use:

- Fruits possess several medicinal properties and are widely used for example in the treatment of asthma, colic and dysentery, and during childbirth.

Note:
for medicinal use
