Cascara buckthorn Plant

Description for Cascara buckthorn

Plant height: 3 - 6 inches (7 - 16 cm)

Plant spread:

Rhamnus purshiana is a species of buckthorn native to western North America from southern British Columbia south to central California, and eastward to northwestern Montana.

Common name(s): Rhamnus purshiana, cascara buckthorn, cascara, bearberry, Chinook Jargon, chitem and chitticum

Flower colours: green

Bloom time: May

Max reachable height: 10 m

Difficulty to grow: easy to grow

Planting and care

An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur. If you order roses from a mail-order company, order early, in January or February (March at the latest). They are usually shipped in the spring as bare roots when plants are fully dormant, well before they have leafed out

Sunlight: Full Sun

Soil: well-drained soil

Water: Medium

Temperature: 30 F

Fertilizer: Apply any organic fertilizer

Caring for Cascara buckthorn

Start with pruning shears for smaller growth. Use loppers, which look like giant, long-handle shears, for growth that is more than half an inch thick. A small pruning saw is handy, as it cuts on both the push and the pull.

Typical uses of Cascara buckthorn

Special features: It's short but notice that the brown on this flower look like a row of bird feathers

Culinary use: leaves

Ornamental use: The plant is used for ornamental purpose.

Medicinal use: Rhamnus purshiana (cascara buckthorn, cascara, bearberry, and in the Chinook Jargon, chitem and chitticum; syn. ... The dried bark of cascara has been used for centuries as a laxative, first by Native Americans in the Pacific Northwest, and then by European/U.S. colonizers.
