01

Copper Leaf, Pulchella Plant

Description for Copper Leaf, Pulchella

Plant height: 3 - 6 inches (7 - 16 cm)

Plant spread:

Basic varieties come in several different colors - red, pink and white. The red is a rusty mix of coppery red with bright pink accents. Pink has beautiful mottled pink, green and white leaves (bright pink in more sun, pastel pink in part shade). White is creamy white mixed with green. Newer cultivars include smaller-leaved shrubs like Inferno as well as new colors such as showy Tricolor with red, green and yellow foliage.

Common name(s): Copper plant.

Flower colours: These shrubs do flower but with narrow, dangling, fuzzy blooms (called "catkins") similar in color to the foliage so the blossoms are all but invisible.

Bloom time: -

Max reachable height: 3 to 5 feet.

Difficulty to grow: Easy.

Planting and care

Add composted cow manure and top soil (or organic peat humus) to the hole when you plant. Plant 3 feet apart. Come out from the house 2-1/2 to 3 feet. If you re planting along a driveway or walk, come in about 3 or 4 feet. Copperleaf plants will work fine in a container.

Sunlight: Copperleaf plants like full sun to part shade - and the more sun, the brighter the leaf color. It will enjoy part shade too, especially in hot and dry climates.

Soil: Plant your copper leaf in organically rich soil that has been amended with compost.

Water: Keep a regular watering schedule for these shrubs. If they stay too dry for too long they won't look their best.

Temperature: Copper plant prefers temperatures above 50 degrees Fahrenheit.

Fertilizer: Fertilize 3 times a year - in spring, summer and fall - with a good granular fertilizer.

Caring for Copper Leaf

Trim occasionally for shape and height (do branch trimming rather than using hedge trimmers). Give the plant a hard pruning in spring (late March or early April) for bushier growth and to keep it the size you want.

Typical uses of Copper Leaf

Special features:

Ornamental use: Landscape uses for copper plant accent by the entry
single yard specimen
anchor plant for a bed of smaller plants
corner-of-the-house accent
hedge
lining a walk or drive
surrounding tall palms
along a blank wall
lining the edge of a porch, deck or patio
