Hibiscus (Yellow Double) Plant

Description for Hibiscus (Yellow Double)

Plant height: 24 - 36 inches (60 - 92 cm)

Plant spread:

Many people who are growing a hibiscus plant choose to do so in a container. This allows them to move the hibiscus plant to ideal locations, depending on the time of year.

Hibiscus is a genus of flowering plants in the mallow family, Malvaceae. It is quite large, containing several hundred species that are native to warm-temperate, subtropical and tropical regions throughout the world. Member species are often noted for their showy flowers and are commonly known simply as hibiscus, or less widely known as rose mallow.

Hibiscus plants prefer a cozy fit when growing in a container. This means that they should be slightly root bound in the pot and when you do decide to re-pot, give the hibiscus only a little bit more room. Always make sure that your growing hibiscus plant has excellent drainage.

The genus includes both annual and perennial herbaceous plants, as well as woody shrubs and small trees. Flowers may be up to 6 inches diameter, with colours ranging from yellow to peach to red. Hibiscus can be planted singly or grown as a hedge plant; they can also be pruned into a single-stemmed small tree. The flowers are attractive to butterflies and hummingbirds.

Hibiscus are deciduous shrubs with dark green leaves; the plants can grow to 15 feet tall in frost-free areas. Flowers may be up to 6 inches diameter, with colors ranging from yellow to peach to red. Hibiscus can be planted singly or grown as a hedge plant; they can also be pruned into a single-stemmed small tree. The flowers are attractive to butterflies and hummingbirds.

Common name(s): Chinese hibiscus and tropical hibiscus, Hibiscus (Red Double)

Flower colours: Yellow

Bloom time: Annual

Max reachable height: 15 feet
