Grewia tiliifolia Plant

## Description for *Grewia tiliifolia*

**Plant height:** 9 - 15 inches (22 - 39 cm)

**Plant spread:**

It is a moderate-sized to a large tree, attaining a bole length of about 30 ft. and a girth of 7 ft. or more. Bark grey or dark brown; leaves stipulate, ovate with the oblique base, acuminate, crenate-dentate.

flowers small, borne on thick axillary peduncles; drupe globose and of the size of a pea, 2 to 4 lobed, black and edible. Dhaman is a very close cousin of Phalsa. The yellow flower resembles the true Phalsa flower very much.

The main difference is in the leaves. The leaves of Dhaman are oblique heart-shaped, a characteristic shared by the Linden trees, which belong to the genus *Tilia*. Flowering season April. Dhanvana is one of the ingredients of Chandanadi taila which is useful in fever with burning sensation. *G. tiliifolia* are used to treat skin diseases.
