Description Ardisia crenata is a species of flowering plant in the primrose family, Primulaceae, that is native to East Asia.

Common name: coralberry

Color: white

Bloom time: May to June

Height: 4.00 to 5.00 feet

Difficulty level: easy to grow

Planting & Care

Both can survive in temperate climates if they are planted in a sheltered area. Arabian is a small bush with evergreen leaves. There are many other varieties of plant, of which are best suited for sub-tropical climates. Learning how to grow will add a striking visual and olfactory touch to the garden.

Sunlight: full sun

Soil: well-drained soil

Water: medium

Temperature: 15°C

Fertilizer: apply any organic fertilizer

Care:

- Do not prune plants in the fall.
- Simply cut off any dead or diseased canes.
- Stop fertilizing 6 weeks before the first frost but continue watering during dry autumn weather to help keep plants fortified during the dry winter.

- Mound, mulch, or add compost after a few frosts but before the ground freezes.
-

Special Feature:

Group in shrub borders, shade gardens or woodland areas. Also effective in naturalized areas where possible colonial spread is not a concern. May be grown as a houseplant in containers that are overwintered indoors.

Use

Medicinal use:

- It is known by a variety of names such as Christmas berry, Australian holly, coral ardisia, coral bush, coralberry, coralberry tree, hen s-eyes, and spiceberry.
- .
- .
- .
