Osmoxylon lineare aureum Plant

Description for Osmoxylon lineare aureum

Plant height: 3 - 6 inches (7 - 16 cm)

Plant spread:

Osmoxylon is a genus of flowering plant of family Araliaceae

Common name(s): Green Aralia, Miagos Bush. Green Aralia, Miagos Bush

Flower colours: White

Bloom time: July to August

Max reachable height: 10.00 to 20.00 feet

Difficulty to grow: Easy to grow

Planting and care

Plants prefer a near-neutral pH range of 5.5 to 7.0. A pH of 6.5 is just about right for most home gardens (slightly acidic to neutral). An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur.

Sunlight: Full sun to part shade

Soil: Well drained soil

Water: Medium

Temperature: 22-24 degrees C

Fertilizer: Apply any organic fertilizer

Caring for Osmoxylyon lineare aureum

Every leaf has a growth bud, so removing old flower blossoms encourages the plant to make more flowers instead of using the energy to make seeds. Clean away from around the base of the rosebushes any trimmed debris that can harbor disease and insects. Late in the season, stop deadheading rugosas so that hips will form on the plants.

Typical uses of Osmoxylyon lineare aureum

Special features: Best utilized in infrequently traveled areas where contact with the plant spines is unlikely. Plants can appear coarse in winter, but the compound foliage, flowers, fruit and general plant habit lend diversity and interest during the growing season.

Ornamental use: The plant is used for ornamental purpose.
