Description

**With this purchase you will get:**

01

Ixora (Any Color) Plant

01

5 inch Grower Round Plastic Pot (Black)

## Description for Ixora (Any Color)

**Plant height:** 5 - 9 inches (12 - 23 cm)

**Plant spread:** 4 - 8 inches (10 - 21 cm)

This product does not have the flowers at the time of shipping. Afterward, the plant will bloom and it could be of any colored flower.

Dwarf Ixora are popularly used as low hedges because of their shrub form and compact appearance. They look attractive when they bloom profusely. However, after blooming, it will take some time for Dwarf Ixora to re-bloom. These plants are dependable bloomers, love the sun, and fit nicely into any size landscape.

The plants possess leathery leaves, ranging from 3 to 6 inches in length, and produce large clusters of tiny flowers in the summer. Members of Ixora prefer acidic soil, and are suitable choices for bonsai.

**Common name(s):** Jungle Geranium, Flame of the Woods, Jungle Flame, West Indian jasmine. rangan, kheme, ponna, chann tanea, techi, pan, santan, jarum-jarum.

**Flower colours:** Any color

**Bloom time:** summer season

**Max reachable height:** Spread at least 3 to 4 inches

**Difficulty to grow:** Easy

## Planting and care

**Sunlight:** Bright light, but avoid direct sunlight in summer.

**Soil:** Sandy soil

**Water:** Moderately

**Temperature:** 20-35 degree C

**Fertilizer:** Feed in spring with slow-release pellets or weekly during growing season with liquid fertilizer.

## Caring for Ixora

Water Ixora as needed to keep the soil evenly moist, but not muddy. Although the plant prefers moist soil, it may rot in excessively soggy soil. Water the shrub sparingly during the winter months.

Feed Ixora in early spring, using an acidic fertilizer formulated for Ixora, azalea and gardenias, which has a ratio such as 4-8-8, along with minor elements that are beneficial.

Repeat in midsummer and autumn. Acidic fertilizer is especially important if the foliage takes on a yellowish cast, indicating a magnesium deficiency caused by improper soil pH. Apply the fertilizer according to label specifications, then water deeply.

In spring, remove the mulch along with the top crust of soil. Replace the removed mulch and soil with fresh mulch. Prune Ixora after blooming slows in late autumn or anytime the shrub looks untidy. Prune each shoot down to just one bud or prune the shrub as needed to create the size and shape desired.

Protect Ixora from aphids and scales. Aphids are tiny, green insects that congregate at joints of the leaves and stems or the undersides of the leaves. Scales are hard-shelled insects that give the foliage a waxy appearance. Regular application of an insecticidal soap spray or neem oil usually helps to control both pests.

## Typical uses of Ixora

**Special features:** Attractive flowering

**Ornamental use:** This plant is used for the ornamental purpose.
