Trachycarpus wagnerianus Plant

Description for *Trachycarpus wagnerianus*

Plant height: 3 - 6 inches (7 - 16 cm)

Plant spread:

Trachycarpus wagnerianus is an easily identified cultivar, with small, stiff leaves. The leaf crown is hemispherical and often extended, especially in younger individuals. New growth is margined with a short but dense white woolly tomentum.

Common name(s): Chusan Palm, Windmill Palm, Palm Waggy, Dwarf Chusan Palm

Flower colours: yellow

Bloom time: -

Max reachable height: 10-20 ft tall and 1-5 ft wide

Difficulty to grow: Easy

Planting and care

Sunlight: Partial sun to Full sun

Soil: Does best in Rich, well-drained, damp but not wet soils with above average fertility.

Water: Moderate. Grows well especially in rich, moist soil

Temperature: Completely unharmed by temperatures down to 7°C (45°F).

Fertilizer: No special demands compared to other types of palms. A slow release fertilizer with an N/P/K ratio of 3:1:2 or 3:1:3. Thus, a formulae of 15:5:15 or 12:4:8 would be adequate. Select a preparation that contains microelements and is preferably a slow release formulae.

Caring for *Trachycarpus wagnerianus*

A palm tree needs to establish its roots first. Only when the roots have developed adequately does leaf development take place. Under normal circumstances no need to provide any protection in winter. However, it would be sensible to wrap the crown and trunk of your palm with fleece in a prolonged period of sub zero temperatures.
Watering in rest period " sparingly Watering in active growth period " moderately Light " bright Temperature in rest period " min 7°C max 24°C (45-75°F) Temperature in active growth period " min 16°C max 24°C (61-75°F) Humidity " low

Typical uses of *Trachycarpus wagnerianus*

Special features:

Ornamental use: Makes a great accent which fits well into small areas like courtyards and entries. It is a tough plant and survives in hot urban landscapes and even thrives there if watered and fed. Also a perfect palm for containers.
