Pterocarpus marsupium Plant

Description for Pterocarpus marsupium

Plant height: 9 - 15 inches (22 - 39 cm)

Plant spread:

Indian kino is a large deciduous tree with spreading branches reaching a height of up to 33 meters. When growing under favorable conditions, the tree can produce a straight bole. A very valuable timber tree that is often planted by the Indian forestry.

Leaves are compound, alternate; stipules small, Leaflets are alternate, stipulate. Flowers are bisexual, yellow, at branch-ends and in leaf-axils, borne in panicles. Fruit is a pod, round-kidney-shaped, broadly winged seed one, somewhat kidney-shaped.

It is used as an astringent and it helps to treat the dental issue like a toothache. Bard and twigs of the Vijaysar tree are also used as a toothbrush. The antimicrobial and anti-inflammatory properties make it a good ingredient in herbal tooth powder.
