Description Rhus glabra, the smooth sumac, is a species of sumac in the family Anacardiaceae, native to North America, from southern Quebec west to southern British Columbia in Canada, and south to northern Florida.

Common name: smooth sumac

Color: Yellowish-green

Bloom time: June

Height: 9.00 to 15.00 feet 9.00 to 15.00 feet

Difficulty level: easy to grow

Planting & Care

Harvest seeds from sumac fruiting clusters in autumn when they are dark brown and dry. Boil water in a pot, then remove the pot from the stove and toss in the seeds. Leave them in the cooling water for 24 hours to remove germination inhibitors.

Sunlight: Full sun to part shade

Soil: well-drained soil

Water: Dry to medium

Temperature: 68 degrees

Fertilizer: Apply any organic fertilizer

Care:

- Drain and dry seeds on a paper towel.
- Place them in the refrigerator for 30 days at a temperature of about 41 degrees Fahrenheit.
- Plant sumac seeds directly outside in autumn.

- Select a spot in sun or partial sun with well-draining soil.
- Plant each seed at a depth of 1/3 to 3/4 inches, about 8 inches apart.
- Water well after planting.
- Sumacs will grow in any soil, including dry wastelands.
-

Special Feature:

Best when massed for stabilizing embankments or for hard-to-cover areas with poorer soils or for naturalizing in wild areas.

Use

Medicinal use:

- Sumac berries can be a tasty, therapeutic treat if you know how to use them

Ornamental use:

- The plant is used for ornamental purpose

Note:

No serious insect or disease problems.

Pot seems to be really small. DO I have to shift the plan to the bigger pot as it starts growing in a few months?
