Description

Description for Balsam rose, Balsam gulab

The balsam plant has a soft, fleshy stem; and spirally arranged long pointed leaves.

Common name(s): Balsam, Touch-Me-Not, Garden Balsam, Rose Balsam, impatiens

Flower colours: Varies

Bloom time: Summer to fall

Max reachahle height: 20 to 70 cm

Difficulty to grow:: Easy to grow

Planting and care

Propagate by seed - Balsam is a prolific self-sower. After one season of growth, it generally reappears from self-sown seeds the next year. After frost has passed, scatter seeds where desired, or sow seeds indoors 6 to 8 weeks before the last spring frost.

Do not cover the seeds with soil, as they need light to germinate. Until the seeds germinate, cover the seed trays with clear plastic to maintain high humidity. Water from below to prevent damping off.

Germination temperature: 65 F to 70 F

Days to emergence: 7 to 14

Sunlight: Full Sun, Partial Sun

Soil: moist and well-drained soil

Water: Moderately

Temperature: 20 to 30 degree C

Fertilizer: Use any organic fertilizer

Caring for Balsam rose

- Watering should be done when Soil feels dry.

Harvesting

Summer to fall

Typical uses of Balsam rose

Special features: Discovered in South East Asia, Balsam is an old-fashioned annual that produces single or double flowers in the leaf axils along the main stem of the plant from summer to early autumn. A great bedding annual plant.

Culinary use: Leaves and young shoots - cooked.

Ornamental use: Balsam plant is used as a hedge plant.

Medicinal use: NA
