Description

Winter hardy to USDA Zones 9-11 where it is easily grown in medium moisture, fertile, well drained soils in full sun. Tolerates some light shade, but best flowers occur in full sun.

Common name: peacock flower

Color: Orange-yellow with red stamens

Bloom time: Seasonal bloomer

Height: 10.00 to 20.00 feet

Difficulty level: easy to grow

Planting & Care

You can plant them either in containers or in the ground where you want them to grow about ½ inch deep in moist soil. Keep soil moist but do not saturate. Answer: I recommend that you wait until after the first freeze and then cut the Pride of Barbados (Caesalpinia pulcherrima) back to the ground.

Sunlight: Full Sun to Partial Shade

Soil: well-drained soil

Water: Medium

Temperature: 30°F

Fertilizer: Apply any organic fertilizer

Care:

- The soil for Pride of Barbados plants does not have to be especially fertile or high in organic matter.
- Poor sandy soils are fine for this plant.
- Soil pH can be acidic, neutral or alkaline.
- Good drainage is extremely important, though.
- The water must drain quickly away from the root zone.

Care:

- Pride of Barbados plants should be watered deeply once or twice each week for the first year or two after planting.
- Once the plants become well established, they are highly drought-tolerant and should not need supplemental water but, for best growth and blooming, water them during prolonged droughts.

Special Feature:

Hedge, screen background. In Hawaii, flowers are sometimes used in leis.

Use

Medicinal use:

- Plants belonging to the family Leguminosae have wide folklore medicinal uses.
- Caesalpinia pulcherrima Swartz vernacularly known as Guletura is widely distributed in India and its leaves, flower, bark, and seeds are used in Indian medicine.
- The plant is considered as a tonic, stimulant, and emmenagogue.
-

Note:

for medicinal use, please consult appropriate doctor before use.
