### Description

Ricinus communis, the castorbean or castor-oil-plant, is a species of flowering plant in the spurge family, Euphorbiaceae. It is the sole species in the monotypic genus, Ricinus, and subtribe, Riciniinae.

**Common name:** castor bean

**Color:** yellow

**Bloom time:** June to October

**Height:** 6.00 to 10.00 feet

**Difficulty level:** easy to grow

### Planting & Care

Before you plant, be sure that you choose varieties proven in your climate. When in doubt, All-America Rose Selections winners are good bets. Or check with your local nursery. If you order plants from a mail-order company, order early, in January or February (March at the latest).

**Sunlight:** full sun

**Soil:** well-drained soil

**Water:** dry to medium

**Temperature:** 10-18°C

**Fertilizer:** Apply any organic fertilizer

### Care:

- Also, select a site that gets full sun.
- For dependable blooms, plants need six to eight hours of direct sunlight a day.
- If it's too shady, the stems will attempt to lean towards the sun or get spindly and fall over.

- Most of the popular varieties prefer acidic to neutral soil, but some are lime-tolerant or prefer alkaline soils.

**Care:**

- Plants love water—but don't drown them.
- That is, they don't like to sit in water, and they'll die if the soil is too wet in winter.
- The ideal soil is rich and loose, with good drainage.
- One of the worst mistakes you can make is to not provide adequate drainage.
- Use mulch.
- 

**Special Feature:**

Shrubby annual. Specimen. Containers.

Use

**Medicinal use:**

- Ricinus communis, the castorbean or castor-oil-plant, is a species of flowering plant in the spurge family, Euphorbiaceae.
- The seed also contains ricin, a water-soluble toxin, which is also present in lower concentrations throughout the plant.

**Note:**

for medicinal use
