Each plant features a basal rosette of large, fleshy, wedge-shaped or paddle-shaped, stalkless, obovate, gray-green leaves which are covered with a white powdery bloom. Rosette leaves are stacked like pancakes (hence the common name of flapjacks), with leaf edges extended upward in order to minimize sun exposure to the leaf surfaces.

While usually grown as a house plant, the succulent perennials of the Kalanchoe family can grow outside in regions with warm or mild winters. Some kalanchoe varieties are sold as annuals and discarded after the flowers fade.

Dense clusters of tiny fragrant yellow flowers appear in spring on this vigorous, easy to grow ground cover. After blooming is finished enjoy the silvery colored, evergreen leaves.
