Description

Description for Aglaonema Costatum, Chinese Evergreen (Green)

Aglaonema Crispum is also quite an undemanding plant. Considered to be a shade tolerant plant with glossy dark green leaves with silver edges. The leaves of the species are oval and the trunk is erect. The plant is often grown in offices due to its unpretentiousness (this cultivar requires minimal care) and beautiful ornamental leaves.

Common name	Flower colours	Bloom time	Height	Difficulty
Aglaonema Siam Aurora, Aglaonema Lipstick, Chinese Evergreen (Red)	White Other: Greenish-white spathe	Seasonal bloom	Rarely exceeding heights of 3 feet	Easy

Planting and care

It is usually grown as an annual. It is easily grown in moist, organically rich, well-drained soils in full sun. Avoid overhead watering. Start seeds indoors 6-10 weeks before last frost date or purchase starter plants. Set out plants/seedlings after last frost date.

Pinch stem tips of young plants to promote bushy type and prevent leggy growth. Deadhead spent flowers to prolong bloom. If flowering slows drastically after the first flush of bloom, consider cutting plants back hard and fertilizing. Snapdragons are inexpensive plants that are perhaps best repurchased each spring.

Sunlight	Soil	Water	Temperature	Fertilizer
Bright light but no direct sunlight.	Loamy Soil	Medium	15 C to 25 C	Apply any organic fertilizer.

Caring for Aglaonema Costatum

- Proper care for aglaonema starts with its proper placement.
- Your task is to find the area that receives less indirect light.
- Place your plant far from doors, air vents and windows in order to ensure it wont suffer from drafts.
- Fertilize the species at least 2 times per month.
- Water them from spring until autumn with an appropriate solution (1 tsp. soluble 20-20-20 analysis fertilizer and 1 gallon of water).
- Water the plant when the top 2 inches of the soil start getting dry.
- One of the basic care instructions includes wiping the leaves with a moistened cloth to remove dust and dirt.

Harvesting

NA
