Planting and care

Creeping Quackgrass is a green to silver colored perennial grass that has blades, which are flat and pointed. The ligule is quite short and it has a broad and continous collar. The auricles are claw like, slender and clasp near the stem. It has non-compresses sheaths and you will see that the upper sheath is smoth while the lower sheath contains short hairs.

Sunlight: Full Sun to Partial Shade

Soil: organic soils

Water: medium

Temperature: 56f

Fertilizer: Apply any organic fertilizer

Caring for Agropyron repens

- Its not easy to control Quackgrass using cultural weed control methods. If you try to hand pull or dig out Quackgrass, it wonâ€™t be effective since the rhizomes in the root system are very well-developed and aggressive. You must use post-emergent weed control that is applied professionally in order to get rid of it.
- To get more insight and information about Creeping Quackgrass, please contact us by giving us a call. We will talk with you and let you know how we can help solve this problem so that you have a nice, lush lawn to enjoy at your home.
