Aloe vera is the scientific name of a plant which lives more than 3 years. It is a succulent and stores water and food in the modified stem. The leaves are thick and fleshy, green to grey-green, with some varieties showing white spots on stem surfaces.

Common name(s): Aloe, Ghrita-kumari, Korphad

Flower colours: Yellow

Bloom time: Summer

Max reachable height: Up to 3 feet

Difficulty to grow: Easy to grow

Planting and care

It can be planted outdoor as well as indoor. Plant in bright, sunny location in a well-drainage pot. Do not plough so much deep as the leaves may get infection from the soil. Cover the root ball when planting but do not let the leaves touch the soil.

You can make the perfect soil by mixing perlite, sand, and regular potting soil. A south facing window would be an ideal spot for an indoor Aloe plant. You can propagate it by the division or stem cutting.

Sunlight: Full sun to partial shade

Soil: Well-drained, sandy potting soil

Water: Less than medium

Temperature: 16 to 35 degrees C

Fertilizer: Use any organic fertilizer

Caring for Aloe vera

- Use porous and well drainage pots as they provide good drainage.
- Avoid to keep in harsh hot sun and damp soil.
- Water a plant when the soil feels dry to touch.
- Feed once and a while during their active growing season.
- Reduce watering in the winter as it goes in dormant condition.
- The crowded plant should be divided and re-potted to promote healthy growth.

Harvesting

Harvest the leaf when it grows well and looks fleshy
