

## Aralia nudicaulis - Plant

The really attractive aspects, however, are the massive woody trunks and sweeping, curving branches and heavy, dense and somewhat shaggy foliage of the specimen plants.

Description

### Description for Aralia nudicaulis

A single leaf stalk grows 18-24, dividing into three parts each with five oval leaflets. A separate stalk, shorter than the leaf stalk, bears ball-shaped clusters of tiny, greenish-white flowers followed in fall by dark purple berries.

Common name	Flower colours	Bloom time	Height	Difficulty
wild sarsaparilla, false sarsaparilla, shot bush, small spikenard, wild liquorice, and rabbit root	White , Green , Brown	May to July	Height: 25.00 to 50.00 feet Spread: 10.00 to 15.00 feet	Easy

### Planting and care

Water Use: Medium

Light Requirement: Sun , Shade

Soil Moisture: Moist

CaCO3 Tolerance: Medium

Soil Description: Poorer, relatively dry, soils.

Sunlight	Soil	Water	Temperature	Fertilizer
Sun , Shade	Poorer, relatively dry, soils.	Medium	The plant is comfortable at ordinary room temperatures of between 65 and 85 degrees Fahrenheit (18-29 C.).	Fertilize every two weeks with liquid house plant fertilizer in spring and summer and monthly in fall and winter.

### Caring for Aralia nudicaulis

- Though they will survive under low light as they long as they have moist soil, they do best in medium or full sun when grown indoors, but should be planted in shady areas if placed outside.
- The thin, fine roots of aralias are subject to rot, so allow the upper half of the soil to thoroughly dry out between waterings.
- Use a light, peat-based potting soil and place the plant in a small pot as a precaution against overwatering.
- This type of soil allows for proper aeration and drainage, preventing the plant's roots from becoming waterlogged.
- Feed aralias with a granular, controlled-release fertilizer with a high nitrogen content every other month.
- Prune the tips of aralia plants to promote the growth of new leaves and to help maintain its full, lush appearance.

## Typical uses of Aralia nudicaulis

**Special features:** Can become aggressive. Rootstock is used as a substitute for official sarsaparilla flavoring.

**Culinary use:** The root was used to make root beer and can be made into a tea.
