Description Thuja is a genus of coniferous trees in the Cupressaceae. There are five species in the genus, two native to North America and three native to eastern Asia. The genus is monophyletic and sister to Thujopsis

Common name: Araza · Arborvitae · Arctium lappa

Color: Evergreen

Bloom time: Non-flowering

Height: 10.00 to 15.00 feet

Difficulty level: easy to grow

Planting & Care

Arborvitae are slow growers so if you plan to use them as a privacy hedge, keep in mind that it may take a few years for you to get the privacy you want. Arborvitae growth averages 4-9 inches in height and 2-6 inches in width per year

Sunlight: Full sun to part shade

Soil: well-drained soil

Water: Medium

Temperature: -2°- 20°

Fertilizer: Apply any organic fertilizer

Care:

- Consider purchasing a mesh to go over your arborvitae during the autumn and winter.
- Not only will this help the snow fall to the ground, but it will also protect your tree from foraging animals.
- Rachel suggests, "Heavy duty multi-strand mesh offers the most protection for your arborvitae and even offers UV protection.
- It is green, to blend right in and can last for seasons

Special Feature:

Specimen, hedge or screen.

Use

Ornamental use:

- The plant is used for ornamental purpose.

Note:

No serious insect or disease problems. Bagworms and spider mites are occasional visitors. Foliage of many arborvitaes develops winter burn (yellows) in cold, exposed sites, however this cultivar shows excellent resistance to this problem. Susceptible to damage/stem breakage in winter from ice and snow accumulations.
