Planting and care

Native to India, Ashwagandha bushes will grow to heights of 3 feet or more and produce light green flowers from midsummer onwards which will develop into orange or deep red berries by fall.

Ashwagandha can be direct sown outdoors following the last frost, approximately 3/8" below the surface of the soil and kept evenly moist. Otherwise, you can sow indoors in early spring to give your starts additional time to develop before going outside. Sow seeds slightly closer to the surface (1/4") if using flats or other small containers indoors.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun,	It needs sandy and well-draining soil in a way that water will drain out quickly,	Keep soil moist throughout the growing season	20 to 30 degrees C	Use any organic fertilizer

pH level should be around 7.5 - 8, neutral to slightly alkaline. Growing Ashwagandha is not possible in soil that retains moisture and remains waterlogged.
