Description

### Description for Asparagus Densiflorus, Asparagus Sprengeri

Asparagus, or garden asparagus, scientific name *Asparagus officinalis*, is a spring vegetable, a flowering perennial plant species in the genus *Asparagus*.

It was once classified in the lily family, like the related *Allium* species, onions and garlic, but the Liliaceae have been split and the onion-like plants are now in the family Amaryllidaceae and asparagus in the Asparagaceae. *Asparagus officinalis* is native to most of Europe, northern Africa and western Asia, and is widely cultivated as a vegetable crop.

Common name	Flower colours	Bloom time	Height	Difficulty
Asparagus, Asparagus Densiflorus	White	Spring	1.5 to 2 feet	Easy to grow

### Planting and care

You locate your asparagus plants on a walk where you know you will find them. Here in Tuscany they will be in the asparagaie - a whole area known to the locals, and me, where asparagus grows everywhere.

Sunlight	Soil	Water	Temperature	Fertilizer
Part shade	Well drained soil	Medium	20 to 30 degrees C	Apply any organic fertilizer

## Caring for Asparagus Densiflorus

- Asparagus needs regular watering, especially while young.
- Asparagus is a heavy feeder and fertilizer should be applied in mid-spring when they are actively growing.
- The plants will need to be cut in spring each year before new growth starts.

## Harvesting

NA

## Typical uses of Asparagus Densiflorus

**Special features:**

**Culinary use:** NA
