Description

Description for Asparagus Densiflorus, Asparagus Sprengeri

Asparagus, or garden asparagus, scientific name *Asparagus officinalis*, is a spring vegetable, a flowering perennial plant species in the genus *Asparagus*.

It was once classified in the lily family, like the related *Allium* species, onions and garlic, but the Liliaceae have been split and the onion-like plants are now in the family Amaryllidaceae and asparagus in the Asparagaceae. *Asparagus officinalis* is native to most of Europe, northern Africa and western Asia, and is widely cultivated as a vegetable crop.

Common name	Flower colours	Bloom time	Height	Difficulty
Asparagus acutifolius, Asparagus aetnensis, Asparagus ambiguus, Asparagus brevifolius, Asparagus commutatus, Asparagus corruda, Asparagus inarimensis	-	Seasonal bloomer	1.5 to 2 feet	Easy to grow

Planting and care

You locate your asparagus plants on a walk where you know you will find them. Here in Tuscany they will be in the asparagaie - a whole area known to the locals, and me, where asparagus grows everywhere.

Sunlight	Soil	Water	Temperature	Fertilizer
Part shade	Well drained soil	Medium	20 to 30 degrees C	Apply any organic fertilizer

Caring for Asparagus Densiflorus

- Plant them, one by one, in garden center container cells and keep them watered.
- Don t forget them while all the other plants come out and do their thing.
- Asparagus shoots are slow performers! Erotically so.
- Water daily Prepare the soil outdoors after ten weeks; till it and add grit or sand if it is clay like. Humus will lighten it too.

Typical uses of Asparagus Densiflorus

Special features:

Ornamental use:
