Description

Description for Bamboo Multi Roots

Multi root bamboo is not the kind of bamboo you're accustomed to seeing. This variety is smaller and related to the dracaenas family. This doesn't grow rapidly.

Its roots only grow a few inches and can't produce runners. The sprouts also experience limited growth. These characteristics make it an ideal house plant.

Common name	Flower colours	Bloom time	Height	Difficulty
Bamboo Multi Roots	-	-	5.0 to 10.0 feet	Easy

Planting and care

Since bamboo likes high ambient moisture levels, daily misting of bamboo house plants are recommended. Place the bamboo where it can get direct natural lighting if possible. Most indoor bamboo cannot retain all their foliage and some leaf drop is to be expected.

Follow fertilizing directions for the size container you have. A good potting soil, mixed with perlite for drainage works great. Just keep a check on the soil and allow it to dry out between watering. Bamboo likes water, but loves drainage.

Do not leave your containers of bamboo outside during the winter months and expect it to live. In cold climate zones you must move the container into a protected warm area during the cold winter months.

Sunlight Partial to full sunlight.	Soil Bamboo plants also like to have fertile, slightly acidic, and well drained but moist soil.	Water The key to watering bamboo is to water often enough and deeply enough to keep the soil moist.	Temperature 18C to 35C	Fertilizer Use a slow release fertilizer.

Caring for Bamboo Multi Roots

- The water in the pot needs to be replaced with fresh, clean water once a week.
- The little pot should be scrubbed to prevent calcium or mineral deposits from building up on the edge of the pot and on the plant stem.
- If the plants have been grown in water, make sure the container is at least half full of water.
- If it is growing in soil, make sure the soil is moist, not soaking or dried out.

Typical uses of Bamboo Multi Roots

Special features: na

Culinary use: na

Ornamental use: This plant is frequently sold in decorative pots as a finished product rather than something to take home and re-pot in a more attractive vessel, which again makes it a good choice if you don't want to put much effort into plant care.

Medicinal use: na
