Bambusa Ventricosa, Buddha Belly Bamboo Plant

Description for Bambusa Ventricosa, Buddha Belly Bamboo

Plant height: 32 - 48 inches

Plant spread: 5 - 9 inches

Bambusa ventricosa is a species of bamboo which is native to Vietnam and to Guangdong province in southern China. The species is widely cultivated in subtropical regions around the world for the bulbous and ornamental culms.

Common name(s): Buddha Belly Bamboo, Buddha Bamboo

Flower colours: Green

Bloom time: Rarely flowers

Max reachahble height: 40 to 55 feet

Difficulty to grow:: Easy to grow

Planting and care

Plants prefer a near-neutral pH range of 5.5 to 7.0. A pH of 6.5 is just about right for most home gardens (slightly acidic to neutral). An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur.

Sunlight: Full sun to part shade

Soil: Well-drained soil

Water: Medium

Temperature: 18 degrees C

Fertilizer: Apply any organic fertilizer

Caring for Bambusa Ventricosa

Diligently water your plants. Soak the entire root zone at least twice a week in dry summer weather. Avoid frequent shallow sprinklings, which won't reach the deeper roots and may encourage fungus. Plants do best with 90 inches of rain per year, so unless you live in a rain forest, water regularly.

Typical uses of Bambusa Ventricosa

Special features: Garden plant. Screens. Windbreaks. Containers. Bonsai.

Culinary use: Leaves
