|--|-------------------------|------------------------------|-------------------------|----------------------------|
| Common name Buddha Belly Bamboo, Buddha Bamboo | Flower colours Green | Bloom time Rarely flowers | Height 40 to 55 feet | Difficulty Easy to grow |
|--|-------------------------|------------------------------|-------------------------|----------------------------|

Planting and care

Plants prefer a near-neutral pH range of 5.5 to 7.0. A pH of 6.5 is just about right for most home gardens (slightly acidic to neutral). An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur.

| | | | | |
|------------------------------------|---------------------------|-----------------|-----------------------------|--|
| Sunlight Full sun to part shade | Soil Well-drained soil | Water Medium | Temperature 18 degrees C | Fertilizer Apply any organic fertilizer |
|------------------------------------|---------------------------|-----------------|-----------------------------|--|

Caring for Bambusa Ventricosa

Diligently water your plants. Soak the entire root zone at least twice a week in dry summer weather. Avoid frequent shallow sprinklings, which won't reach the deeper roots and may encourage fungus. Plants do best with 90 inches of rain per year, so unless you live in a

rain forest, water regularly.

Typical uses of Bambusa Ventricosa

Special features: Garden plant. Screens. Windbreaks. Containers. Bonsai.

Culinary use: Leaves
