Description

Description for Bambusa Ventricosa, Buddha Belly Bamboo

Bambusa ventricosa is a species of bamboo which is native to Vietnam and to Guangdong province in southern China. The species is widely cultivated in subtropical regions around the world for the bulbous and ornamental culms.

Common name	Flower colours	Bloom time	Height	Difficulty
Buddha Belly Bamboo, Buddha Bamboo	Green	Rarely flowers	40 to 55 feet	Easy to grow

Planting and care

Plants prefer a near-neutral pH range of 5.5 to 7.0. A pH of 6.5 is just about right for most home gardens (slightly acidic to neutral). An accurate soil test will tell you where your pH currently stands. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with ground sulfur.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun to part shade	Well-drained soil	Medium	18 degrees C	Apply any organic fertilizer

Caring for Bambusa Ventricosa

Diligently water your plants. Soak the entire root zone at least twice a week in dry summer weather. Avoid frequent shallow sprinklings, which wont reach the deeper roots and may encourage fungus. Plants do best with 90 inches of rain per year, so unless you live in a rain forest, water regularly.

Typical uses of Bambusa Ventricosa

Special features: Garden plant. Screens. Windbreaks. Containers. Bonsai.

Culinary use: Leaves
