Description

Description for Barleria Montana, Dongari Koranti , Barleria (Purple)

Spiny Barleria is a low spiny shrub, growing to 1 m high. Stems and branches are cylindrical and slightly tapering. Oppositely arranged oblong lancelike leaves are 3-6 cm long. Slender spines 2-3 cm, occur in leaf axils.

Common name	Flower colours	Bloom time	Height	Difficulty
Yellow Throated Barleria	purple.	August-February	24-36 in	easy to grow

Planting and care

Plant bulbs 1-1½ to 5 times their own depth. Where winters are severe, make sure there is at least 3 inches of soil covering the bulb.

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun to Partial Shade	well-drained soil	Medium	30Å°C	Apply any organic fertilizer

Caring for Barleria Montana

Apply a low-nitrogen, high-potash fertilizer after flowering if bulbs are not performing. Water late-flowering daffodils in dry spring weather (flowers may abort in dry conditions).

Typical uses of Barleria Montana

Special features: Yellow Barleria is a wild growing perennial,rather prostrate but sturdy.The leaves are alternate,rectangular,lanceolate,serrate and dark green in colour.

Ornamental use: The plant is used for ornamental purpose
