Description

The plant will grow as its surrounds allow, ranging from about a metre high in exposed conditions to two metres in shady, sheltered conditions. The leaves are soft, covered in a light hair, with a slightly blue hue to their green.

Common name: Barleria Repens

Color: White

Bloom time: April and May.

Height: They usually only reach heights of up to a metre, but can get larger if they are climbing up a tree.

Difficulty level: Easy.

Planting & Care

Sunlight: Full sun to partial shade.

Soil: Barleria obtusa grows in a wide variety of soils. To ensure good drainage, add compost and mulch well to retain water.

Water: Regular watering when possible will result in a spectacular show of colour.

Temperature: They tolerate temperatures only above at least 1°C.

Fertilizer: Organic fertilizer pellets and a handful of rich compost to each hollow.

Care:

- Nip off the growing tips during spring and the early part of summer to increase bushiness and flowers.
- After the shrub has flowered, cut back hard, then prune or tip periodically to ensure neat, compact growth.
-

Use

Ornamental use:

- The shrublet can be planted in mixed borders and banks.
