Description

Description for Bottle Brush

Callistemon is a genus of shrubs in the family Myrtaceae, first described as a genus in 1814. The entire genus is endemic to Australia but widely cultivated in many other regions and naturalised in scattered locations.

Common name	Flower colours	Bloom time	Height	Difficulty
-	Light brown	September to October	2.50 to 3 feet	Easy to grow

Planting and care

Outdoors, plant bottlebrush shrubs in a sunny location. The plants aren't picky about the soil type as long as it is well drained. If the soil is very poor, enrich with compost at planting time. Once established, bottlebrush plants tolerate drought and moderate salt spray.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun to part shade	Well-drained soil	Dry to medium	9 degrees C	Apply any organic fertilizer

Caring for Bottle Brush

Callistemon bottlebrush care consists of regular watering while the tree is young and annual fertilization until it matures. Water young trees weekly in the absence of rain, applying the water slowly to saturate the soil as deeply as possible. A layer of mulch over the root zone will slow the evaporation of water and help prevent weeds.

Typical uses of Bottle Brush

Special features: Plant in clumps, mass or naturalize in a lightly-shaded woodland setting, native plant garden or naturalized area.

Ornamental use: The plant is used for ornamental purpose. Its generally kep indoor in living room and in terrac area.

Medicinal use: Antibacterial, antifungal, and antioxidan
