Common name(s): Hanging bulb terrarium, Succulent terrarium

Flower colours: NA

Bloom time: NA

Max reachable height: Up to 10 cm (Plant)

Difficulty to grow: Easy to grow

Planting and care

You should use water-soluble organic fertilizer in little quantity. Don't apply in large quantity; it will promote more vegetative growth. We maintain the small plant size in the terrarium. That's the way we should control the vegetative growth.

If there is a need of re-potting then the potting media should be as follows a one and a half inch to two-inch layer in the bottom of the container. The soil should be 3 parts of potting soil, 1 part of grit (pumice), 1 part of the horticultural-grade sand, 1/2 part of the compost etc.

Sunlight: Bright area with indirect sunlight

Soil: Pumice, horticultural-grade sand, compost(2:2:1)

Water: Sparingly

Temperature: 20 to 25 degree C

Fertilizer: Liquid fertilizer

Caring for Bulb

- Spray the water once in the fortnight with spraying bottle on the soil.

- Avoid spraying on the plant.
- This terrarium container don't have the drainage hole or holes, avoid application of large quantity water.
- Give it bright with indirect sunlight or near artificial light sources.
- The soil should not be saturated or soggy as this condition will lead to rotting.
- The glass walls should allow the light to reach the plants and it should be clean from dust, drafts, and temperature changes.
- If there is too much moisture on the inner side of the container that you cannot see your plants, then open the lid for temporarily to allow it to dry.
- Avoid too much direct sunlight to the container; it may burn the plants and the glass container may get very warm.
- Remove fallen leaves from the terrarium.

Typical uses of Bulb

Special features: Well arranged, settled-up terrarium

Ornamental use: It is used as the ornamental plant.
