Description

Description for Calathea Corona

Calathea zebra plants are natives of Brazil and their bright green leaves can be boldly striped in white, yellow or pink in a striking feather-like pattern that is sure to catch the eye.

Common name	Flower colours	Bloom time	Height	Difficulty
Zebra plant.	-	-	Upto 3 feet	Easy.

Planting and care

Sunlight	Soil	Water	Temperature	Fertilizer
Diffused light.	Holds moisture but is also well draining. A good potting mix consists of one part soil, two parts peat moss and two parts perlite.	Regular small amounts of water during the growing seasons as soon as the surface starts to dry up.	Temperatures above 55 degrees F. (13 degrees C.) to survive and temperatures around 70 degrees F. (21 degrees C.) to thrive.	Fertilize occasionally with a half strength solution of liquid fertilizer.

Caring for Calathea Corona

Wet feet is probably the major cause of failure when growing zebra indoor plants. A lack of water, however, will cause leaves to curl. Humidity is the next problem to be conquered when growing zebras indoors. Plants should be misted several times a week.

Typical uses of Calathea Corona

Special features:

Ornamental use: They are showpiece to any indoor garden.

Pot seems to be really small. DO I have to shift the plan to the bigger pot as it starts growing in a few months?
