Description Easily grown in average, medium to wet, well-drained soil, in part shade to full shade. Prefers constantly moist, acidic soils in heavy shade. Spreads slowly by rhizomes to form an attractive ground cover for shade areas.

Common name: wild ginger

Color: Red , Green , Purple

Bloom time: April to May

Height: 0.50 to 1.00 feet

Difficulty level: easy to grow

Planting & Care

Wild Ginger plants should be grown in a site with light to deep shade, but they will appreciate a little morning sun. Asarums are sometimes capable live in poor, dry soil but the result will be very unsatisfactory. For Gingers to thrive, they should be planted in moist, humus rich, slightly acidic, well-drained soil. Add plenty of compost and fallen conifer needles (if available) to the soil at planting time.

Sunlight: Full Sun

Soil: well-drained soil

Water: medium

Temperature: -40°F.

Fertilizer: Apply any organic fertilizer

Care:

- Due to their shallow growing rhizomes, the fastest and easiest method of propagating mat forming Wild Ginger plants is by cutting sections of the rhizome, each containing a pair of leaves, into 2"-3" pieces in the spring.

Special Feature:

Usually grown as a ground cover in shady areas. Woodland gardens, native plant gardens or naturalized areas. Also may be used for edging.
Use

Medicinal use:

- cantharophilic, sometimes myophilic

Ornamental use:

- The plant is used for ornamental purpose

Note:

for medicinal use, please consult appropriate doctor before use.
