Description

Description for Caraway Seeds

Caraway, also known as Persian cumin, (*Carum carvi*) is a biennial plant in the family Apiaceae, native to western Asia, Europe, and North Africa.

Common name caraway thyme	Flower colours Pink	Bloom time June to July	Height 0.25 to 0.50 feet	Difficulty easy to grow
------------------------------	------------------------	----------------------------	-----------------------------	----------------------------

Planting and care

It is native to Europe and Western Asia where it thrives in full sun and well drained soil with pH ranges of 6.5 to 7.0. It isn't a good plant for hot, humid climates and prefers cool temperate zones.

Sunlight Full Sun to Partial Shade	Soil well-drained soil	Water Dry to medium	Temperature 30°C	Fertilizer Apply any organic fertilizer
---------------------------------------	---------------------------	------------------------	---------------------	--

Caring for Caraway Seeds

- Sow the seeds 1/2-inch deep in fall or spring.
- Once seed germinates, thin the caraway plant to 8 to 12 inches apart.

Typical uses of Caraway Seeds

Special features: Herb gardens, containers. May be sprawled over small rocks or ledges in rock gardens or over walls. Also effective as a

small area ground cover.

Culinary use: Leaves have a strong scent of caraway and may be used to flavor a variety of culinary dishes including potato salads, vegetables, or meats.

Ornamental use: The plant is used for ornamental purpose.

Medicinal use: Caraway is popular for fruits (also known as "seeds") that has pungent anise-like flavor and aroma and is used for culinary preparations with medicinal benefits.
