Description

Description for Cassia fistula, Golden shower Tree, Bahava

Cassia fistula is commonly known as The Golden shower tree. Cassia is a vast genus with various species consisting of yellow colored flowers. Cassia fistula is a large shrub or medium sized tree which grows up to a height of 20 to 40 feet height.

The Cassia has few distinguishing features can be observed with little trouble. It is slightly smaller, but has the same spreading crown, long drooping branches and numerous, feathery leaves, but the branches are rough. The flowers are similar but the sepals are smooth, green inside and deep-red underneath.

C. fistula or the golden shower tree is generally used in landscape because of its wonderful showy flowers. During the blooming season, the

flowers entirely cover the tree and give a perfect contrast to the landscape than the regular one.

Common name	Flower colours	Bloom time	Height	Difficulty
Golden Shower Tree, Amaltas	Golden yellow	Spring, Late Spring, Early Summer	20 to 40 feet	Easy

Planting and care

10-20 seeds per pack. Gorgeous tropical tree producing long strands of yellow flowers. A very common garden tree throughout Hawaii and many tropical locations. Its flower is the official flower of Thailand and the tree has a number of important medicinal uses. Fairly fast growing to 25-60 ft. Hardy to 20-24F, suitable outdoors in both subtropical and tropical climates.

This is a national flower of Thailand and one of the most impressive cassias. From early spring through summer, it displays beautiful cascades of golden flowers. Cassia is a large genus with some 500 species, among which are a number of highly attractive flowering trees. To many tropical gardeners, the most beautiful is Cassia fistula. This is a medium to large tree with ovate, pointed leaflets; when these drop, usually in the dry season, masses of bright gold flower clusters appear on almost every branch.

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun	Acidic, Well-drained soil	Water the tree freely during the heat of spring through fall when the plant actively grows with new leaves and stem length. Supplement natural rainfall as the soil need to keep moist. Droughts during the summer growing season retards the growth and may cause premature leaf drop or branch die-back.	Hardiness 35-40 degrees F. Extensive frost or subfreezing temperatures cause full leaf defoliation	Apply a general, well-balanced fertilizer annually.
