Description C. paniculatus is a deciduous vine with stems up to 10 cm (3.9 in) in diameter and 6 m (20 ft) long with rough, pale brown exfoliating bark covered densely with small, elongated lenticles. The leaves are simple, broad, and oval, obovate or elliptic in shape, with toothed margins. C. paniculatus is a climbing shrub found throughout India.

Common name: mal-kangani

Color: Yellow

Bloom time: may-june

Height: 1,800-2,000 meters.

Difficulty level: easy to grow

Planting & Care

The deep planting encourages the developing stem to send out roots to help stabilize the plant and perhaps eliminate the need for staking. Also, deep planting keeps lily bulbs cool when temperatures soar

Sunlight: Full Sun

Soil: well-drained soil

Water: Medium

Temperature: 55 degree C

Fertilizer: Apply any organic fertilizer

Care:

- Growing plants can be inexpensive, particularly when growing them from seed.
- Seeds of plants flowers should usually be sown directly into the sunny flower bed, as developing roots do not like to be disturbed.

Care:

- Apply a high-potassium liquid fertilizer every 2 weeks from early spring until 6 weeks after flowering.
- Keep moist in winter.
-

Special Feature:

The leaf and seed of Jyotismati is used in the form of powder and oil to treat udara roga, wound, sidhma, drowsiness in fever and amenorrhoea. Skin diseases (eczema / Sidhma): Jyotismati oil processed with water of apamarga-ksara (*Achyranthes aspera*) processed seven times. By massaging it destroys eczema (AH.Ci.19.75). Amenorrhoea: Japa (*hibiscus rosa-sinensis*) flowers with sour gruel and fried jyotismati leaves, by intake, induce menstruation (CD.62.25)

Use

Medicinal use:

- Oil from the seeds is used as a traditional medicine in Indian Unani and Ayurvedic medicine.
- It is a racetam and Nootropic.

Ornamental use:

- The plant is used for ornamental purpose.

Note:

Celastrus paniculatus has a relative that grows in the United States that is poisonous, [specify] so identifying this plant carefully can be important.
