Description Hedychium flavescens is a perennial flowering plant from the Zingiberaceae. It is native to the Himalayas, Sichuan, and northern Vietnam, and naturalized in various other lands.

Common name: white garland-lily

Color: White

Bloom time: Seasonal bloomer

Height: 3.00 to 6.00 feet

Difficulty level: easy to grow

Planting & Care

Hedychium plants can be sown outside at the beginning of spring before the last frost has happened. Simply cover the seed with a light dusting of topsoil. Ginger Lily and other Hedychium members like to grow in an area of the garden that is sunny and has very good drainage. They prefer to grow in a moist Humus rich soil.

Sunlight: Full Sun to Partial Shade.

Soil: well-drained soil

Water: Medium to wet

Temperature: 41°F

Fertilizer: Apply any organic fertilizer

Care:

- Ginger Lilies require regular watering.
- Once the flowering season is over cut back the flowering stems to the ground.
- If growing as a perennial then the rhizomes should be brought inside in cold areas.
- More Hedychium plants can be had by division of the rhizomes (make sure that each section contains an eye) at the end of winter.
-

Special Feature:

Borders. Container plants.
