Polyscias filicifolia Plant

## Description for Polyscias filicifolia

**Plant height:** 3 - 6 inches

**Plant spread:**

Polyscias fruticosa, or Ming aralia, is a perennial dicot evergreen shrub or dwarf tree native to India. The plant grows fairly slowly but can reach up to 1 to 2 meters in height.

**Common name(s):** Ming aralia

**Flower colours:** Pale yellow to white

**Bloom time:** Seasonal bloomer

**Max reachable height:** 6.00 to 8.00 feet

**Difficulty to grow:** Easy to grow

## Planting and care

One important thing to keep in mind when growing Ming Aralia indoors is that it must be kept constantly moist. Even in the winter, when most houseplants need a reduction in the amount of water they receive, this plant's soil should still be kept consistently moist (but not wet).

**Sunlight:** Full Sun to Partial Shade

**Soil:** well-drained soil

**Water:** Medium

**Temperature:** 16-29 degrees C

**Fertilizer:** Apply any organic fertilizer

## Caring for Polyscias filicifolia

Keep your aralia in very bright light. Some direct sun is best. Full afternoon sun may be too much. They can be pruned to shape. They do not mind being fairly root bound for long periods of time. A good shower to clean the leaves from time to time either outdoors or in your bathtub is very helpful. Fertilize regularly.

## Typical uses of Polyscias filicifolia

**Special features:** Tropical specimen/accent or hedge for frost free areas. Where not winter hardy, plants may be grown indoors in containers.

**Ornamental use:** The plant is used for ornamental purpose.
