Cluster Palm Plant

## Description for Cluster Palm

**Plant height:** 3 - 6 inches

**Plant spread:**

Small palm with slender trunks in clusters. Trunks are ringed with old leaf scars and leaves are borne on short stalks reaching up to 5 feet long. They are made up of linear, green leaflets with notched tips.

**Common name(s):** Cluster Palm

**Flower colours:** White

**Bloom time:** Early Summer to Late Summer

**Max reachable height:** 20-30 feet.

**Difficulty to grow:** Easy.

## Planting and care

A week to 10 days before planting, add 2 to 4 inches of aged manure or compost and work into the planting site to improve fertility and increase water retention and drainage. If soil composition is weak, a layer of topsoil should be considered as well. No matter if your soil is sand or clay, it can be improved by adding the same thing: organic matter. The more, the better; work deep into the soil. Prepare beds to an 18 inch deep for perennials. This will seem like a tremendous amount of work now, but will greatly pay off later. Besides, this is not something that is easily done later, once plants have been established.

**Sunlight:** It can survive full sun, partial shade, or full shade.

**Soil:** well-drained soil.

**Water:** Requires consistently moist soil; do not let dry out between waterings

**Temperature:** Minimum 30-40 degrees F

**Fertilizer:** -

## Caring for Cluster Palm

## Typical uses of Cluster Palm

**Special features:**

**Ornamental use:** Landscaping
