Description

Description

A practical concept in the field of potting mediums is Co-Co-Soil. It is unique in the sense that it is not only Co-Co-Peat but added with 20% Humus making it far superior than other available conventional Co-Co-Peat. It is a complete potting medium by itself. It is a processed, fumigated and a high quality multipurpose soil conditioner and soil substitute.

Fields of uses for co-co-soil:

1. Indoor/Outdoor plants in Pots:

The main problem of water logging and soil hardening can easily be overcome by use of coco soil, mix 25%-40% coco soil with regular soil.

2. Seed Germination:

The germination is better as it provides perfect climate for root development. 30% coco soil can be used with regular soil.

3. Garden Beds:

Use of coco soil ensures less heat build up, more air circulation and allows better working in soil.

4. Cutting/propagation:

Plant the cutting or seedlings directly into coco soil for better results. You can also mix it with soil in ratio 30-60%. In tissue culture the plantlets can be directly grown in coco soil. In grafting process coco soil itself can be pasted over the joint to obtain excellent results.

5. Transpiration:

Due to its ability to hold sufficient water, it automatically becomes an ideal medium to grow plants that are being transported.

6. Lawns:

Coco soil minimizes the problem of weeds and insects. Landscapers can use coco soil during new plantation in the garden. For home gardens:

20-30% coco soil as top dress. For show lawns: 30-40% coco soil with regular soil. For Golf courses: 10-20% for root zone regions.

7. Fruit Trees:

To ensure better establishments and faster root development use 20-30% coco soil along with regular soil. For existing trees dig up few inches of soil and add coco soil.

8. Kitchen Gardens:

Coco soil is an ideal medium for all the vegetables, flowers, herbs etc. It is easier and safer to handle and provide better growth and yield. Coco soil can be used between 30-60%. Due to its light weight it automatically becomes the best option for terrace gardens.

9. Commercial Growers:

For Growers/Professionals of all kind of plants, coco soil forms the most suitable part as ideal medium. It ensures better nutrient availability, strong foliage and roots which are very important. The plants are more healthy and stronger resulting in better sales.
