[Ask a question about this product](#)

Description Coffea is a genus of flowering plants whose seeds, called coffee beans, are used to make various coffee beverages and products. It is a member of the family Rubiaceae.

Common name: Coffea arabica

Color: white to pink

Bloom time: May to June

Height: 6.00 to 15.00 feet

Difficulty level: :easy to grow

Planting & Care

Pour the water in the reservoir and put the carafe back on the heating plate. Measure Your Grounds: Add the desired amount of grounds to the filter: about 1 tablespoon per 5 to 6 fluid ounces of cold water for regular coffee, and 2 tablespoons per 5 to 6 fluid ounces for strong coffee.

Sunlight: Part shade

Soil: well-drained soil

Water: Medium

Temperature: 195 F (91 C) and 205 F (96 C).

Fertilizer: Apply any organic fertilizer

Care:

- Coffee Care is a company devoted to providing (and drinking!) speciality coffees and teas from around the world.
- We have been supplying businesses in the North of England for 30 years now so if you really enjoy drinking a quality coffee then look out for Coffee Care signs all around Yorkshire, Lancashire and Cumbria.
-

Special Feature:

In frost free climates, it is grown commercially for production of coffee beans or ornamentally as a specimen or in shrub borders. Elsewhere, it makes an attractive container plant for sun rooms that can be taken outside to patio areas in summer.

Use

Medicinal use:

- Image result for Coffee medicinal use The potential health benefits associated with drinking coffee include: protecting against type 2 diabetes, Parkinson s disease, liver disease, liver cancer, and promoting a healthy heart.
