Description

Description for Crassula Campfire

Crassula capitella or the Campfire Plant is a perennial succulent plant native to southern Africa.

Campfire crassula is a branching succulent with fleshy leaves that mature from bright lime green to bright red. Leaves turn bright red if not over-watered and the plant receives direct sun for most of the day, during drought or in cold temperatures¹. Great for borders, containers, edging, fillers, ground covers, rock gardens, xeriscaping, and coastal gardens¹.

This variety typically blooms in the following colours: Green-yellow and Cream. The leaves of this particular variety normally show as Coral red and Android robot green

Campfire Plant grows as an evergreen and is a flowering succulent. Being an evergreen plant, it will keep its leaves throughout the year.

Campfire Plant is known for its clump-forming habit and growing to a height of approximately 30.48 cm (11.89 inches).

Try planting Campfire Plant if you'd like to attract butterflies and bees to your garden.

Common name	Flower colours	Bloom time	Height	Difficulty
Crassula capitella, Crassula capitella Campfire, Campfire Crassula, Crassula Blaze,	white	summer or early autumn	1ft.	easy to grow

Crassula Flame

Planting and care

Growing plants can be inexpensive, particularly when growing them from seed. Seeds of plants flowers should usually be sown directly into the sunny flower bed, as developing roots do not like to be disturbed

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun	well-drained soil	Medium	30F.	Apply any organic fertilizer

Caring for Crassula Campfire

- Crassula are easy to grow, but they are susceptible to mealy bugs and fungal diseases.
- As with all succulents, overwatering is sure to be fatal, so err on the side of too dry rather than too wet.
- Never let your Crassula sit in water.
- If you water from beneath by letting the plant sit in a saucer of water, make sure to pour off any excess water after a few minutes.
- Repot as needed, preferably during the warm season. To repot a succulent, make sure the soil is dry before repotting, then gently remove the pot.
- Knock away the old soil from the roots, making sure to remove any rotted or dead roots in the process. Treat any cuts with a fungicide.
- Place the plant in its new pot and backfill with potting soil, spreading the roots out as you repot.
- Leave the plant dry for a week or so, then begin to water lightly to reduce the risk of root rot.
- Crassula are generally started by division, offsets or leaf cuttings.
- Plants can be easily propagated from a single leaf: sprout leaves by placing them into a succulent or cacti mix, then covering the dish until they sprout

Typical uses of Crassula Campfire

Special features: The Campfire crassula is a branching succulent with fleshy propeller-like leaves that mature from bright lime green to bright red. Leaves turn bright red if not over-watered and the plant receives direct sun for most of the day, during drought or in cold temperatures.
