Cubeba Plant

Description for Cubeba

Plant height: 3 - 6 inches

Plant spread:

Cubeb, or tailed pepper is a plant in genus Piper, cultivated for its fruit and essential oil. It is mostly grown in Java and Sumatra, hence sometimes called Java pepper. The fruits are gathered before they are ripe, and carefully dried. Commercial cubebs consist of the dried berries, similar in appearance to black pepper, but with stalks attached, the "tails" in "tailed pepper". The dried pericarp is wrinkled, and its color ranges from grayish brown to black. The seed is hard, white and oily. The odor of cubebs is described as agreeable and aromatic and the taste as pungent, acrid, slightly bitter and persistent. It has been described as tasting like allspice, or like a cross between allspice and black pepper.

Common name(s): Piper cubeba

Flower colours: dark gray to black.

Bloom time: rarely and only for a short time.

Max reachable height: 18 to 20 feet

Difficulty to grow: easy to grow

Planting and care

Most outdoor varieties can endure temperatures as low as 50°F (10°C) without any problem. That being said, fifty degrees is still not an ideal temperature because it tends to slow down tissue growth and photosynthesis later in the day.

Sunlight: Full Sun

Soil: well-drained soil

Water: medium

Temperature: 70 and 75F (21-23C)

Fertilizer: Apply any organic fertilizer

Caring for Cubeba

These outdoor plants can also benefit from a polyethylene plastic covering that keeps things nice and toasty while also protecting the garden from the elements. Heaters can increase protection even more. Download my free marijuana grow bible for more information about growing marijuana.

Typical uses of Cubeba

Special features: then you can get new seeds free of charge. And don't forget to download my free grow guide.

Culinary use: leave

Ornamental use: The plant is used for ornamental purpose

Medicinal use: Tibetan Medicine for treating problems
