Description Easily grown in average, medium to wet, well-drained soil in full sun. Tolerates light shade (and appreciates some afternoon shade in the deep South), but tends to flop and require support if grown in too much shade.

Common name: Culver s root, Culver s physic

Color: White

Bloom time: May to August

Height: 4.00 to 7.00 feet

Difficulty level: easy to grow

Planting & Care

Where they will receive a minimum of 5 to 6 hours of full sun per day. Plants grown in weak sun may not die at once, but they weaken gradually. Give them plenty of organic matter when planting and don't crowd them. Wear sturdy gloves to protect your hands from prickly thorns.

Sunlight: Full sun

Soil: well-drained soil

Water: Medium to wet

Temperature: 150 °F

Fertilizer: Apply any organic fertilizer

Care:

- plant care is not difficult but does require vigilance.
- The vines need to be trained early when they are young.
- You may use plant ties or just weave them through trellis sections.
- Fertilize the plant in spring just before new growth appears.
- Pinch off the tips of the vines in the second year to promote branching which will fill the trellis with bushy growth.
-

Special Feature:

Tall spikes provide a strong accent and good vertical height for the garden. Effective at the rear of the perennial border or in a mixed shrub border, native plant garden, cottage garden or wild garden.

Use

Ornamental use:

- The plant is used for ornamental purpose.

Note:

No serious insect or disease problems. Seldom needs staking, but may need support if grown in too much shade.
