Description

Description for Cyrtopodium paranaense

As a terrestrial they can be a garden plant because of their large size which may account for not often being seen in collections.

Common name	Flower colours	Bloom time	Height	Difficulty
Cyrtopodium paranaense Cyrtopodium palmifrons	Bright yellow, Yellow-green.	dec-feb (winter)	Plants terrestrial, 50â€“150 cm. Pseudobulbs elongate, fusiform. Inflorescences erect, racemes to panicles, 100â€“200 cm. Flowers bright yellow, 3â€“4 cm wide; lip with middle lobe margins not conspicuously verruculose-tuberculate, lateral lobes bright yellow, shorter than middle lobe. Capsules to 10 cm.	Easy.

Planting and care

Sunlight	Soil	Water	Temperature	Fertilizer
Full sun.	sand peat mix.	Keep the soil moist, cut back the water in winters.	-	-
