Description

Description for Deenanath Grass

Widely available in this location, it is ideal for livestock feed and can be sustainably cultivated on small plots of land.

Thus desho is becoming increasingly utilized, along with various soil and water conservation techniques, as a local method of improving grazing land management and combating a growing productivity problem of the local region.

Common name(s): Desho grass, Deenanath grass, Deenanath, Pennisetum pedicellatum, indigenous grass, Poaceae

Flower colours: -

Bloom time: -

Max reachable height: 1-2 ft

Difficulty to grow: Moderately easy

Planting and care

Land should be free of volunteer plants. The previous crop should not be the same variety or other varieties of the same crop. Break the seed

dormancy by mechanical scarification in a defluffer followed by soaking in a mixture of GA3 (200 ppm) and KNO3 (0.25)percent (1: 1) for 16 hours. Pellet the seed with DAP at 60 g/kg and arappu leaf (Albizia amara) powder at 500g/kg-1 of seed to enable easy handling of seed during sowing and also for better establishment.

Sunlight: Full Sun

Soil: well-drained soil

Water: Soil should be bit moist.

Temperature: 15 to 38 C.

Fertilizer: Apply any organic fertilizer

Caring for Deenanath Grass

- It can be grown throughout the year under irrigated condition.
- Suitable for growing in the monsoon season under rainfed condition.
- Plough 2-3 times to obtain good tilth and form beds and channels.
- Irrigate once in ten days or depending on soil condition.
- Germination is higher for the seeds from the first and second formed tillers.
- Delayed harvesting resulted in shattering loss. The middle and proximal portions of the spike produce high quality seeds.

Typical uses of Deenanath Grass
