Description Delonix regia is a species of flowering plant in the bean family Fabaceae, subfamily Caesalpinioideae. It is noted for its fern-like leaves and flamboyant display of flowers

Common name: ?Leguminosae

Color: red

Bloom time: May-July,

Height: 50 feet (15 m)

Difficulty level: easy to grow

Planting & Care

The flamboyant tree goes by many names, including the flame tree, royal poinciana tree, and its Latin name of Delonix regia. The flamboyant tree grows a profusion of blooms in shades of fiery red, pink, and orange with soft-leaved branches that resemble ferns. The large flat seedpods look like snow peas on a grand scale. These pods house the large seeds needed to grow new trees.

Sunlight: Full Sun

Soil: well-drained soil

Water: medium

Temperature: 45°F (7.2°C).

Fertilizer: Apply any organic fertilizer

Care:

- The flamboyant tree is a tropical plant that grows best outdoors in USDA hardiness zones 11 and 12, but can survive in conditions as

low as hardiness zone 9b.

- If you live in a zone outside of these areas, you can grow one of these trees inside your house.
-
- The trees grow quickly and reach around 40 feet tall and 60 feet wide when mature.
- When growing them inside your home, it is best to grow them as bonsai trees to keep them within scale.

Care:

- Delonix regia, commonly called Royal Poinciana, requires full sun and daily watering for fullest flowering and is drought tolerant but not salt tolerant.
- The tree grows in a wide range of well-drained acidic or alkaline soils, including clay, sand and loam.

Special Feature:

some say the world's most colorful tree. For several weeks in spring and summer it is covered with exuberant clusters of flame-red flowers, 4-5 in across. Even up close the individual flowers are striking: they have four spoon shaped spreading scarlet or orange-red petals about 3 in long, and one upright slightly larger petal (the standard) which is marked with yellow and white

Use

Medicinal use:

- Delonix regia (Bojer ex Hook.
-) Raf.
- (Fabaceae), commonly known as Krishnachura, Gulmohar, Malinche and Tabachine (Cowen, 1984) is grown commonly in different parts of Bangladesh.
- The leaf of this tree is used by the folk medicinal practitioners of Bangladesh for controlling sugar level in diabetic patients

Note:

:for medicinal use, please consult appropriate doctor before use.
