

Delosperma Lehmannii - Plant

Delosperma flowers grow in hardiness areas and will bloom for most of the summer and fall. Their foliage is mostly evergreen and, because of this, they make a great year-round ground cover.

Description

Description for Delosperma Lehmannii

Looking for a drought tolerant but lovely flower to fill in a troublesome dry area in your garden. You may want to try planting ice plants.

Common name	Flower colours	Bloom time	Height	Difficulty
-	Green	June - August	3 to 6 cm	Easy to grow

Planting and care

Ice plants prefer full sun but can tolerate some light shade in the garden. Because ice plants are succulents, they do not tolerate wet soil, though they do well in poor soils. In fact, wet soil, especially during the winter months, is likely to kill the plants. In areas where the soil stays

consistently dry, this plant can become invasive, so it is best to take this into consideration when planting it. The ice plant can be propagated by division, cuttings or seeds. If propagating by division, it is best to divide the plants in the spring. Cuttings can be taken anytime in the spring, summer or fall. When grown by seeds, scatter the seeds on the surface of the soil and do not cover them, as they need light to germinate.

Sunlight	Soil	Water	Temperature	Fertilizer
Full Sun to Partial Shade	Well-drained soil	Medium	-7 degrees C	Apply any organic fertilizer

Caring for Delosperma Lehmannii

The ice plant can be propagated by division, cuttings or seeds. If propagating by division, it is best to divide the plants in the spring. Cuttings can be taken anytime in the spring, summer or fall. When grown by seeds, scatter the seeds on the surface of the soil and do not cover them, as they need light to germinate.

Typical uses of Delosperma Lehmannii

Special features: Hardy ice plant (Delosperma) is a succulent, perennial ground cover with daisy-like flowers. The ice plant is not called an ice plant because it is cold hardy, but rather because the flowers and leaves seem to shimmer as though covered in frost or ice crystals. The plants grow to be about 3 to 6 inches tall and 2 to 4 feet wide.

Ornamental use: The plant is used for ornamental purpose.
