## Caring for Dendrobium Orchid

- Re-pot the plant when grows large and overgrows its container, the potting material deteriorates, the plant has to be split or divided.
- It is better to re-pot epiphytes every year. The best time for repotting is when fresh roots emerge at the bases of the previous year growth.
- The dendrobium orchid should have a 50-70% humidity level around them. You should spray the water on the whole plant and potting medium for maintaining the humidity.
- Also you can select the area where fountain or water flow is available.
- After your orchid has finished blooming, use sharp scissors to cut off the flowering stem to promote regrowth.
- Crowding of plants can lead to problems with insect infestations and fungus. Keep air to circulate around the plant.

## Harvesting

Flowers are harvested when they are fully open as the flowers.

## Typical uses of Dendrobium Orchid
