

Dieffenbachia Camilla - Plant

A frost-sensitive tender perennial, dumbcane is commonly grown as a houseplant. 'Camille' has creamy yellow leaves with rich green borders. This plant has a bushy look but as its lower leaves are shed its stem becomes more evident.

Dieffenbachia Camilla Plant

01

6 inch Grower Round Plastic Pot (Black)

Description for Dieffenbachia Camilla

Plant height: 9 - 15 inches

Plant spread: 4 - 8 inches

Native to Central and South America and a relative of our skunk cabbage, *Symplocarpus foetidus*, Dieffenbachia is a broad-leaved foliage plant with thick succulent stems.

The large and showy dieffenbachia can be the perfect living decoration for the home or office. When you learn how to care for a dieffenbachia plant, you'll find it to be adaptable to different kinds of lighting and conditions.

Common name(s): Dumbcane or leopard lily

Flower colours: White

Bloom time: Late Spring, Early Summer, Summer

Max reachable height: 2 to 4 feet.

Difficulty to grow: Easy.

Planting and care

With a minimum temperature of 5 °C (41 °F), dieffenbachia must be grown indoors in temperate areas. They need light, but filtered sunlight through a window is usually sufficient. They also need moderately moist soil, which should be regularly fertilized with a proprietary house plant fertilizer.

Leaves will periodically roll up and fall off to make way for new leaves. Yellowing of the leaves is generally a sign of problematic conditions, such as a nutrient deficiency in the soil. Dieffenbachia responds well to hot temperatures and dry climates.

Sunlight: Partial Shade, Full Shade

Soil: Well draining soil.

Water: Lots of water during the summer. Soil stays moist but not wet. During the winter season watering should be reduced.

Temperature: 17 to 27 degrees C

Fertilizer: During the primary growing season " March Through October " feed every other week when watering using a complete liquid food. During the winter months use NO fertilizer and water only.

Caring for Dieffenbachia Camilla

- When potting or repotting plants, springtime is best just before the growing season begins.
- Rotate the dieffenbachia house plant regularly to provide adequate light to all sides of the plant and prevent it from reaching toward the light on one side.

Typical uses of Dieffenbachia Camilla

Special features:

Ornamental use: The large and showy dieffenbachia can be the perfect living decoration for the home or office.
